

SoftWorks Systems

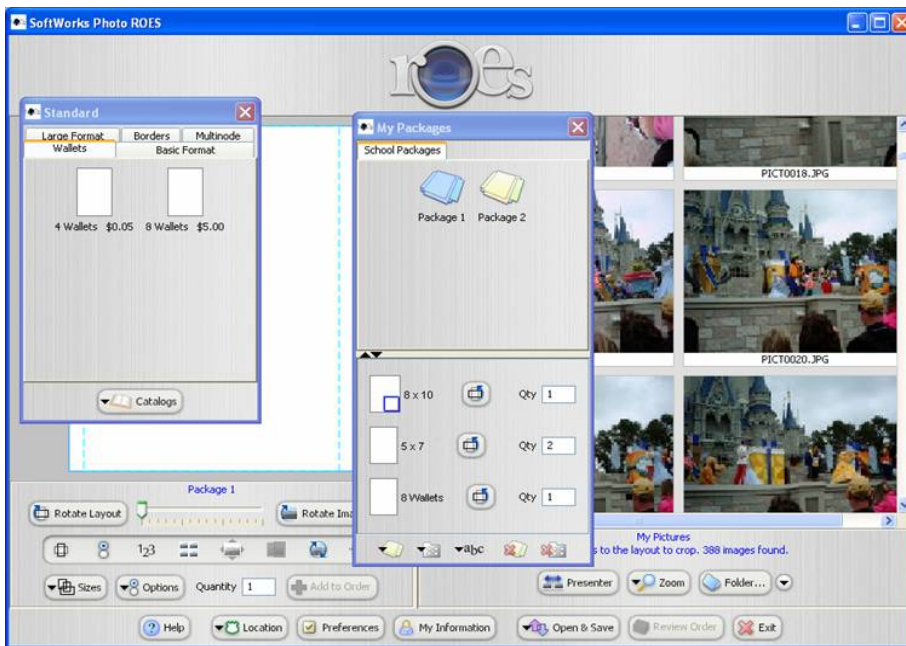

# roes PACKAGER

*Software That Works!*

The **Packager** allows the photographer to define their own packages from the products offered by your lab - perfect for studio, school, and sports pictures. The Packager runs as an additional floating palette space within the ROES Client. Photographers can create various package groups, then create packages by dragging products from your Catalog palette into the My Packages palette.

*ROES was voted favorite online ordering system in a poll of readers of Photographic Processing magazine!!*
