

SoftWorks Systems

roes P A G E R

Software That Works!

THE PAGER is our newest add-on module for use by the studio in the ROES Client. This powerful new tool will allow your customers to completely modify products specified by the lab – nodes can be moved, added, deleted, resized, or rotated and set to accept images, text, or backgrounds the photographer would like to add! The ability to add text colors, image opacity, drop shadows and grid constraints will give your customers the freedom to create their own unique products.

ROES was voted favorite online ordering system in a poll of readers of Photographic Processing magazine!!
